# 1. Test Highlighting

## 1.1. Code Block Highlighting

```
def decode_title(obj_bytes: bytes) -> str:
    """Decode catalog headline using chardet library."""
    chardet_ret = chardet.detect(obj_bytes)
    try:
        str_ret = obj_bytes.decode(chardet_ret["encoding"])
    except UnicodeDecodeError:
        str_ret = obj_bytes.decode(chardet_ret["encoding"],
        "backslashreplace")
        LOG.warning(
            'Could not fully decode catalog headline "%s". Replaced
character(s) with escaped hex value.',
            str_ret,
        )
    return str_ret
```

## 1.2. Code Inline Highlighting

This chapter contains code as inline highlightings like `def decode_title(obj_bytes: bytes) -> str` from the code above.

This also includes normal Highlighting like this `from pathlib import Path` example for importing Pathlib.

## 1.3. Adminition

This chapter contains example for admonitions

### **!** Wichtig

A very importing Adminition

 **Warnung**

A warning Adminition

** Bemerkung**

A note Adminition

## 1.4. Tables

Treat	Quantity	Description
Albatross	2.99	On a stick!
Crunchy Frog	1.49	If we took the bones out, it wouldn't be crunchy, now would it?
Gannet <code>Ripple</code>	1.99	On a stick!

Tab. 1.1 Frozen Delights!
